Lightfastness Test Criteria (Indoor Display Condition)

EPSON Archival Matte Paper (Print mode: Quality) Light Source

Fluorescent light 70,000 lux Glass mount: Fade criteria Pure YMC 30% loss at OD=1

Display-life Calculation Total illuminance (500 lux x 10 hours x 365 days = 1 year)

This Ighthashness test is a simulation of color fading at indoor preservation condition under fluorescent light (indoor display condition) with glass mount. The data is calculated by EPSONs accelerated test and it door mean EPSON guaranteed periods. The estimated longevity does not indicate the color changing and the durability of the paper itself. There are other causes of color fading such as ozone, temperature and human tight other than light. EPSONs newly developed pigment ink has high stability against these factors especially against light. Test developed and conducted by EPSON.
