Lightfastness Test Criteria (Indoor Display Condition)

Paper:	EPSON Archival Matte Paper (Print mode: Quality)
Light Source:	Fluorescent light
Intensity:	70,000 lux
Temperature:	24°C
Humidity:	60% RH
Glass mount:	2mm, soda lime
Fade criteria:	Pure YMC 30% loss at OD=1
Display-life Calculation:	Total illuminance (500 lux x 10 hours x 365 days = 1 year)

This lightfastness test is a simulation of color fading at indoor preservation condition under fluorescent light (indoor display condition) with glass mount. The data is calculated by EPSON's accelerated test and it does not mean EPSON guaranteed periods. The estimated longevity does not indicate the color changing and the durability of the paper itself. There are other causes of color fading such as ozone, temperature and humidity other than light. EPSON's newly developed pigment ink has high stability against these factors especially against light. Test developed and conducted by EPSON.
